

### Living Lab Turin, Italy

#### NBS description

The urban laboratory “OrtoMobile”- micro gardens in boxes, promoted and implemented by ITER - City of Turin is part of an educational strategy „Educational co-designing board“ set up for proGReg. It brings together various stakeholders with active involvement of the local educational system: school communities, groups of citizens (organized or not) engaged in communication, training and co-designing in an approach of lifelong learning and peer education.

The easy to implement OrtoMobile gardens for all ages have been installed in six schools of the Mirafiori Sud district, promoting social interaction, both in classrooms and at home. Strong collaborative attitudes enable co-implementation of simple and effective installations of indoor and outdoor areas in schools.

#### Aim & goals

The objectives of the educational activities can be summarized as follows:

- promote the active role of the local educational system and school communities through co-creation processes in order to provide continuity,
- contribute to developing co-design processes and defining management models of NBS
- Modelling a school acting as a Civic Centre: a public structure open to the territory in the Mirafiori area
- Enhance educational projects already active in the area and support the creation of further initiatives in the area
- Identify and establish links and collaborations with local partners

#### Target groups (beneficiaries)

- teachers and students from primary and secondary schools.
- students with disabilities from a vocational school.
